

# JAVADA MASSIVLAR

Array (massiv) – bu bir xil turdagi o'zgaruvchilar (ma'lumotlar) jamlamasidir. **Java** da **array** deganda bir xil toifadagi elementlardan iborat ob'ekt tushuniladi. Unda biz faqat belgilangan (aniq) miqdordagi elementlarni saqlashimiz mumkin. Javada Array indeksga asoslangan bo'lib, uning birinchi elementi 0 indeksga ega.

# Java Array – Structure

# Bir o'lchovli massiv

## One Dimensional array

Initialization `int a[] = new int [12];`

Value

1	2	3	4	5	6	7	8	9	10	11	12
---	---	---	---	---	---	---	---	---	----	----	----

Index

↑	↑	↑	↑	↑	↑	↑	↑	↑	↑	↑	↑
a[0]	a[1]	a[2]	a[3]	a[4]	a[5]	a[6]	a[7]	a[8]	a[9]	a[10]	a[11]

`System.out.print(a[5]);`

Output: 6

# Afzalligi

- **Code Optimization:** Kodni optimallashtiradi, ma'lumotlarni osongina olishimiz va saralashimiz mumkin.
- **Random access:** Istalgan indeksdagi xoxlagan elementni olishimiz mumkin.

# Noqulayligi

- **Size Limit:** Biz belgilangan miqdordagi elementlarni saqlashimiz mumkin. Dastur bajarilish jarayonida uning o'lchami o'zgarmasdir. Bu muammoni hal qilish uchun javada collectionlardan foydalaniladi.
- **Elements type:** Massivda faqat toifasi bir xil bo'lgan elementlarni saqlash mumkin.

# Javada massiv turlari

Javada 2 xilturdagi massivlar mavjud:

- **Bir o'lchovli** (Single Dimensional Array)
- **Ko'p o'lhovli** (Multidimensional Array)

# Bir o'lchovli massiv

## One Dimensional array

Initialization `int a[] = new int [12];`

Value

1	2	3	4	5	6	7	8	9	10	11	12
---	---	---	---	---	---	---	---	---	----	----	----

Index

↑	↑	↑	↑	↑	↑	↑	↑	↑	↑	↑	↑
a[0]	a[1]	a[2]	a[3]	a[4]	a[5]	a[6]	a[7]	a[8]	a[9]	a[10]	a[11]

`System.out.print(a[5]);`

Output: 6

Syntax to Declare an Array in java

```
dataType[] arr; (or)
```

```
dataType []arr; (or)
```

```
dataType arr[];
```

Instantiation of an Array in java

```
arrayRefVar=new datatype[size];
```

# Example of single dimensional

```
int a[]=new int[5];//declaration and instantiation
```

```
a[0]=10;//initialization
```

```
a[1]=20;
```

```
a[2]=70;
```

```
a[3]=40;
```

```
a[4]=50;
```

# Declaration, Instantiation and Initialization of Java Array

```
int a[]={33,3,4,5}; //declaration, instantiation and initialization
```

# foreach Loops Arrays

```
1 public class TestArray {  
2  
3     public static void main(String[] args) {  
4         double[] myList = {1.9, 2.9, 3.4, 3.5};  
5  
6         // Print all the array elements  
7         for (double element: myList) {  
8             System.out.println(element);  
9         }  
10    }  
11 }
```

# Ko'p o'lchovli massiv

In such case, data is stored in row and column based index (also known as matrix form).

# Example of multi dimensional

```
class MultiDimArrayDemo {  
    public static void main(String[] args) {  
        String[][] names = {  
            {"Mr. ", "Mrs. ", "Ms. "},  
            {"Smith", "Jones"}  
        };  
        // Mr. Smith  
        System.out.println(names[0][0] + names[1][0]);  
        // Ms. Jones  
        System.out.println(names[0][2] + names[1][1]);  
    }  
}
```

# Syntax to Declare Multidimensional Array

```
dataType[][] arrayRefVar; (or)  
dataType [][]arrayRefVar; (or)  
dataType arrayRefVar[][]; (or)  
dataType []arrayRefVar[];
```

Example to instantiate Multidimensional Array in java

```
int[][] arr=new int[3][3];//3 row and 3 column
```

# Example to initialize Multidimensional Array

```
//3 row and 3 column
int[][] arr=new int[3][3];
arr[0][0]=1;
arr[0][1]=2;
arr[0][2]=3;
arr[1][0]=4;
arr[1][1]=5;
arr[1][2]=6;
arr[2][0]=7;
arr[2][1]=8;
arr[2][2]=9;
```

```
//declaring and initializing 2D array
int arr[][]={{1,2,3},{2,4,5},{4,4,5}};

//printing 2D array
for(int i=0;i<3;i++){
    for(int j=0;j<3;j++){
        System.out.print(arr[i][j]+" ");
    }
    System.out.println();
}
```
